

Concept Note and Agenda

National Workshop on Risk-informed Governance and Decision-making for Circular Economy, Green Growth, Resilience and Climate Action in Mozambique

4 - 6 September 2023

09:00 – 17:00 | Mozambique (GMT+2)

16:00 – 00:00 | Seoul (GMT+9)

03:00 – 11:00 | New York (GMT-4)

Venue: Maputo, Mozambique.

*Jointly organized by the
Ministry of Land and Environment of Mozambique, and the
United Nations Department of Economic and Social Affairs (UN DESA)
in collaboration with the United Nations Resident Coordinator Office in Mozambique and
United Nations Development Programme (UNDP) in Mozambique*

1. Background

The United Nations Department of Economic and Social Affairs (UN DESA), through its Division for Public Institutions and Digital Government (DPIDG), and its Project Office on Governance (UNPOG/DPIDG), and the Ministry of Land and Environment of Mozambique in collaboration with the UN Resident Coordinator Office and United Nations Development Programme (UNDP) in Mozambique, is co-organizing a 3-day National Workshop on *Risk-informed Governance and Decision-making for Circular Economy, Green Growth, Resilience and Climate Action in Mozambique*, to be held from 4 to 6 September 2023 in Maputo, Mozambique.

The National Workshop is being organized in response to the expressed capacity development request received from the Government of Mozambique through its Ministry of Land and Environment in 2022. The workshop will be attended by invited national and local/provincial government officials from across Mozambique with UN, other invited international and local experts and officials joining as speakers and resource persons/facilitators.

2. Context

Climate change is a defining challenge of the 21st century, and it is both compounding existing threats to sustainable development as well as creating new obstacles. Heatwaves, heavy precipitation, droughts, tropical cyclones, sea-level rise and ocean warming and acidification are all phenomena that can undermine countries' ability to achieve the objectives of the 2030 Agenda for Sustainable Development. Effectively integrating resilience and climate action into national and local sustainable development plans and programmes requires enabling policies, guidelines, legal and institutional frameworks, capacities and investments at the national and sub-national levels. The recently published [Intergovernmental Panel on Climate Change's Sixth Assessment Report](#) of 2022 on Impacts, Adaptation and Vulnerability highlights how climate change is increasingly and disproportionately affecting the world's most vulnerable. The report underscores the critical need for adaptation and solutions that cut across sectors and systems in addressing social inequities for a climate-resilient future.¹

Mozambique is considered one of Africa's most vulnerable countries to climate change with weak institutional capacities and recurrent extreme weather events. Climate-related hazards in the country which include droughts, floods, storms, and cyclones are occurring at an increasing frequency, which is having a cumulative and devastating impact on an often-unprepared population. While Mozambique ranks 174 out of 188 countries for per capita greenhouse gas (GHG) emissions, and contributes about 0.06% to global emissions, it is the 35th most susceptible and the 24th least prepared country for climate change impacts.² This calls for increased investments in human capital, strengthening of public institutions, governance systems and innovations to improve preparedness and urgency of action. Over the last two decades, the country has experienced an increase in extreme weather events, which are expected to become more frequent and intense in the future. In 2022, Mozambique was hit by tropical storm Ana, the Dumako Depression and cyclone Gombe in January, February and March respectively, impacting about 1 million people.³

The [2030 Agenda for Sustainable Development](#), including the [Sendai Framework for Disaster Risk Reduction 2015-2030](#), the [Addis Ababa Action Agenda](#), the [Paris Agreement on Climate Change](#), and the [New Urban Agenda](#) recognizes the important role of local governments in accelerating development. Local governments and other sub-national organizations have a critical role to play in addressing current

and other emerging challenges facing society. The pervasive impact of climate change especially on local government's roles and responsibilities underscores the need for strengthening capacities, institutional coordination and reinforces the need for adopting the whole-of-government and whole-of-society approaches in responding to the climate impact.⁴ The challenge of building the effective institutional structures, insufficient resources, capacities and authority at local government level are a key constraint affecting their ability to respond effectively to disasters leading to massive losses. The nature of relationships between national and local governments and the coordination mechanism can influence resilience policies and programmes. The challenge facing today's policy makers, governments and community leaders is that the rate, frequency, intensity, nature and geographical distribution of threats and subsequent risks is changing rapidly and requires risk-informed decision making. Risk-informed measures require timely, accurate and reliable action and are major enablers in addressing multiple simultaneous threats and complex risks.⁵

In response to the risks of climate change, the Government of Mozambique is making efforts to effectively address the impact of climate change on the economy and social infrastructure. In this regard, Mozambique has developed a solid policy framework such as the National Climate Change Strategy, the Green Economy Action Plan, the NDC and is currently finalizing a Climate Change Financing Strategy. In addition, the African Union in 2022 awarded Mozambique as Climate Change and Disaster Risk Champion, a recognition of the country's efforts to adopt best practices in tackling climate change and to pioneer the design of local adaptation plans, a tool that integrates climate change into policy planning.

The 11 Principles of Effective Governance for Sustainable Development as proposed by the UN Committee of Experts on Public Administration (CEPA) and endorsed by ECOSOC provides a useful reference point and a benchmark for strengthening capacities and provides a framework across public administrations and institutions to achieve the SDGs. The 11 principles provide a reference point highlighting the most used strategies in building effective, accountable and inclusive institutions at all levels of government. Achieving these principles calls for the adoptions of new legislations to implement the SDGs; ensuring that national plans, policies and strategies take into account the integration and mainstreaming the SDGs across all sectors; putting in place the right institutional mechanisms as well as enhancing local capacities to address external shocks. UN DESA is committed to ensuring the robust integration of the SDGs into national and local plans, policies and frameworks, as well as monitoring, evaluation, review and reporting on progress of SDG implementation.

Local government authorities serve as a vehicle for the implementation of nationally driven policies, to ensure that the mandates outlined at a national scale are carried out to deliver meaningful results at the local scale. Local governments therefore require human, technical, institutional, and strategic capacities to develop and implement locally appropriate adaptation and mitigation strategies to combat climate change.⁶ Mayors, local government officials, leaders, professionals, and decision-makers are at the forefront of dealing with the impact of disasters and delivering essential public services, especially in times of crises through risk-informed decision-making. Being among the first responders during disasters and other public emergencies, local governments are sometimes faced with wide-ranging responsibilities that require certain capacities to deal with them. They are most likely the first institutions to anticipate, manage and reduce disaster risk.⁷ The anticipated impacts of climate change cut across virtually every aspect of national and local government responsibility. Consequently, assertive action is needed by local governments in managing climate risks and building inclusive, sustainable, and resilient societies. Strengthening risk and disaster risk informed governance at national

and sub-national levels is very essential for crisis preparedness, prevention, mitigation, response, recovery and re-habilitation.

3. Objectives

This workshop aims to build the capacity of national and local government officials made up of provincial officials to accelerate progress on the 2030 Agenda for Sustainable Development and the African Union Agenda 2063. Participants will have their capacities strengthened as they gain in-depth knowledge and understanding on key issues on harnessing risk-informed governance, circular economy, green growth, government innovation, climate action, disaster risk reduction (DRR) and resilience to design and implement strategies to help minimize the adverse impact of climate change and promote inclusive public service delivery. The workshop will also explore how to design resilient bankable circular economy projects to access funding opportunities from institutions such as the Global Environment Facility (GEF), Green Climate Fund (GCF) and other development finance institutions.

4. Thematic Focus, Format and Methodology of the Workshop

The workshop will be conducted in a hybrid format (i.e., virtual and onsite) where key participants in Mozambique with some speakers/resource persons will meet in person, while other speakers/resource persons will join virtually via the Zoom platform. The link to the Zoom platform will be shared with participants and speakers in due course. The workshop will consist of hands-on interactive discussions, breakout group activity sessions and reporting back session. The discussions will be organized and conducted through presentations, small groups, exchange of ideas, information and case studies on practical examples and lessons learned from other countries in order to assess how international good practices can inspire similar actions, especially at local level in Mozambique. The workshop will be conducted in English with simultaneous translation into Portuguese. All materials will be made available online at <https://unpan.un.org/home>.

The workshop will specifically cover the following sessions:

- **Session 1** – *Strengthening risk-informed governance and the use of digital technologies for resilient communities in this Decade of Action.*
- **Session 2** – *The role of public institutions in promoting a circular economy: policies, strategies, regulatory frameworks and innovative practices.*
- **Session 3** – *Empowering public institutions to spearhead climate action and promote green growth for accelerated progress on the 2030 Agenda and the Africa 2063 Agenda.*

Session Description

Session 1 – Strengthening risk-informed governance and the use of digital technologies for resilient communities in this Decade of Action.

Strengthening risk-informed governance and leveraging digital technologies is vital for ensuring disaster risk reduction (DRR) and building resilient communities in this Decade of Action. This session aims to explore the critical intersection between risk-informed governance, digital technologies, DRR and resilient communities. Through interactive discussions, exercises, peer-to-peer learning opportunities and innovative case studies, participants will deepen their understanding of the key concepts and strategies of risk-informed governance, leveraging innovative technologies, disaster risk, hazards, including risk assessment, early warning systems and the importance of building resilience across communities. The session will also place emphasis on the significance of integrating DRR strategies into development policies, plans and programmes to ensure sustainability and resilience in the face of increasing crises and climate change impacts.

Session 2 – The role of public institutions in promoting a circular economy: policies, strategies, regulatory frameworks and innovative practices.

This session will focus examining the role of public institutions in promoting a circular economy through policies, strategies, regulatory frameworks and innovative practices particularly in Mozambique. The session will explore the potential of circular economy principles and its significance in achieving the ambitious goals set by the 2030 Agenda and the Africa 2063 Agenda. Participants through presentations, interactive discussions, and collaborative exercises will explore wide-ranging insights and delve into the principles, policies, regulatory frameworks, challenges, opportunities, innovative practices and benefits of transitioning towards a circular economy and how public institutions contribute to this. The critical role of ICTs and emerging technologies in promoting circular economy will be assessed with emphasis on the importance of multi-stakeholder engagement, partnerships, monitoring and evaluation, technology adoption and effective policy coherence at all levels.

Session 3 – Empowering public institutions to spearhead climate action and promote green growth for accelerated progress on the 2030 Agenda and the Africa 2063 Agenda.

This Session aims to facilitate a comprehensive discourse on how to empower public institutions to spearhead climate action and promote green growth for accelerated progress on the 2030 Agenda and the Africa 2063 Agenda in Mozambique. With a strong focus on sustainability, innovation and inclusivity, this session will bring together policymakers, experts and stakeholders to explore innovative strategies, practices, case studies and actionable solutions for spearheading climate action and green growth in Mozambique. Participants will have the opportunity to be engaged in interactive discussions, exercises, knowledge sharing, peer-to-peer learning and collaborative problem-solving sessions to identify opportunities and address challenges in areas such as green investments, green growth, renewable energy, circular economy, climate resilience, climate finance and innovative financing. The session will conclude with group activity for developing action plans and a roadmap for accelerated change.

5. Target Audience and Expected Outcomes

The target audience of the workshop will include about 40 to mid- to senior level public officials drawn from ministries, departments, municipalities, agencies, provincial governments, CSO's, private sector and units engaged in promoting issues of risk-informed governance and sustainable development, local adaptation and resilience strategies, climate action, DRR, circular economy, green growth etc. This will include representatives and focal points, mayors, policy planning officers and decision-making officers at the national and provincial level. In addition, speakers from UN DESA, the UN Resident Coordinator Office and UNDP in Mozambique, UNEP, the Ministry of Land, and Environment, Ministry of Finance and Economy of Mozambique, GEF, AfDB, GGGI and Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ), will be engaged for a successful and impactful event. By the end of the workshop, participants are **expected** to have: -

- Clearly understood, equipped and able to apply the tools and competencies required for strengthening risk-informed governance and the use of digital technologies for resilient communities in this Decade of Action.
- Enhanced their understanding of the role of public institutions in promoting a circular economy through policies, strategies, regulatory frameworks and innovative practices.
- Gained insights on empowering public institutions to spearhead climate action and promote green growth for accelerated progress on the 2030 Agenda and the Africa 2063 Agenda.

- Increased their capacities to promote climate action at the institutional, organizational, and individual levels with enhanced capacities through a holistic approach of capacity development in support of climate action.
- Developed skills on enhancing monitoring and evaluation and building partnerships for action-oriented implementation of the SDGs in Mozambique.
- Developed action plans and a roadmap for climate change policy response on a resilient circular economy and effective resource mobilization for designing bankable projects.

6. Agenda of the Workshop

DRAFT AGENDA

Time	Monday 4 September 2023
08:00-17:00	
08:30-09:00	<p>Good morning</p> <ul style="list-style-type: none"> • <i>Check-in and registration of participants onsite</i> • <i>Guest speakers online log-in to the Zoom meeting room 15 minutes before the start of the workshop for final check of connection.</i>
09:00-09:20	<p>Moderator</p> <ul style="list-style-type: none"> • Mr. Samuel Danaa, Associate Capacity Development Expert, UNPOG/DPIDG/UN DESA
