Round table to check participants` existing understandings

Examples for lead questions

• In your experience: What are the institutional strengths and weaknesses of your working environment for the creation of policy coherence?

• Can you describe the institutional arrangements for SDG implementation in your country?
What is module 2 about?

- Assessment of the institutional readiness of a governance system for policy coherence
- Integrated indicator framework for indicator 17.4.1
- Political commitment as a starting point to assess readiness for policy coherence
- Overview of options for institutional design for policy coherence and implementation arrangements
Key objectives of the module

Why?

Concepts

What

Strategy

• Appreciate the conduct and benefits of an institutional readiness assessment for policy coherence with a view to define priorities for capacity development.
• Understand how the insights from the assessment can be translated into concrete actions by developing individual and organizational action plans to make progress in daily work.
• Identify policy areas and policies with cross-sectoral dimensions that require coherent and integrated policymaking.

How

Organization
What will be achieved through module 2?

- Understand a holistic perspective on the institutional system
- Reflect on the building blocks of an institutional system for policy coherence
- Assess institutional readiness
- Transfer assessment findings into institutional change
Key Concepts: Building Blocks for Policy Coherence

- Political commitment
- Transformational leadership, Human Resources & Changing Mindsets
- System thinking & policy linkages
- Organization Structures & Processes
- Coherence between National & Local/Regional Level
- Digital technology and data
- Financing
- Stakeholder Engagement
- Monitoring, reporting & evaluation
Starting Point: Indicator 17.4.1

- Goal 17: Partnership for the Goals
- Target 17.4: Enhance policy coherence for sustainable development
- Indicator 17.4.1: Mechanisms in place to enhance policy coherence of sustainable development

- UNEP as the Custodian Agency for Indicator 17.4.1 developed an integrated indicator framework
  - Tier-II-methodology by the Inter-agency and Expert Group on SDG Indicators (IAEG-SDGs)
    - Tier 2: Indicator is conceptually clear, has an internationally established methodology and standards are available, but data are not regularly produced by countries
### Integrated Indicator Framework 17.4.1

- Developed by UNEP
- Eight dimensions
- Values: 0-10
- 0 = no mechanism is in place, 10 = strongest version of the mechanism is in place, adds to a total between 0 and 80 for each reporting country, translated into a percent value
- Countries can
- Measure progress over time
- Assess strengths and weaknesses as they move towards policy coherence

Institutional Readiness Assessment for Policy Coherence

- Holistic view on institutions
- Interdependence of the building blocks
- All contribute to moving towards coherence if adapted accordingly
Towards an administrative transformation

• Implementing the building blocks
  • A holistic view on the pre-conditions to achieve policy coherence
  • To move towards policy coherence governments need to turn their attention to these building blocks
    • Depending on a country’s institutional system, political structures and needs, it can prioritize single building blocks to move forward
  • The readiness assessment helps identify strengths and weaknesses and demands
  • Prioritization of building blocks is a political decision
Readiness Assessment on Governance Capacities & Institutional Arrangements for Policy Coherence: Indicators I

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>

Readiness Assessment on Governance Capacities & Institutional Arrangements for Policy Coherence: Indicators II

Organizational Structures & Processes
- An institutional mechanism to bring together relevant ministries and government entities to enhance coherence across sustainable development related policies

Financing
- Mechanisms to promote the alignment of private and public finance to policy coherence objectives and to track related expenditures

Digital Technology and Data
- Frameworks to support the use of digital tools and data in government
<table>
<thead>
<tr>
<th>Coherence between National and Local/Regional Level</th>
<th>• mechanisms for aligning priorities, policies and plans between various levels of government</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stakeholders Engagement</td>
<td>• mechanisms to ensure that laws, policies, plans programs and major development are developed through participatory processes</td>
</tr>
<tr>
<td>Monitoring, reporting &amp; evaluation</td>
<td>• mechanisms in place to systematically monitor and evaluate the effects of policies on sustainable development and cross-sectoral impacts</td>
</tr>
</tbody>
</table>
Activity: Brainstorming

• Think of your country and working environment!
• Spontaneously think about what the you consider the strengths and weaknesses of this context for moving towards policy coherence!
• Write on post-its
  • Strengths
  • Weaknesses
Individual Activity

Please fill out three building blocks of the UN-DESA Readiness Assessment on Governance Capacities and Institutional Arrangements for Policy Coherence on an individual basis!

- Building Block 1: Institutionalization of political commitment towards policy coherence
- Building Block 3 requires answers based on facts related to organizational structures and processes for inter-ministerial coordination/integration
- Building Block 4 requires answers based on facts attesting the system thinking and policy linkages: integration of the three dimensions of sustainable development and systematic assessment of policy effects.
Plenary Round Table

Plenary round table
• Discuss the findings from Building Block 1!
The political nature of policy coherence

• Policy coherence requires decisions on trade-offs between different policy solutions
  • achieving coherence requires negotiation between different interests, represented by institutions or actors with unequal power or weight
• Policy solutions reflect how problems are defined and represent different ideological preferences
• Decisions on policies or preferred policy solutions are based on
  • Ideology, norms, values, diverging interests
• Policies reflect political power constellations
  • less powerful interests may be neglected
  • Who is involved in decision-making and what are the power relations between involved actors?
• Risks of policy coherence
  • sectoral expertise may be undervalued
Transparent, universal, inclusive, what’s not to like?

Yeess, with good tools!

... and capacity development.

That will work!! Now we just need leaders with political will. Done!

Political will?? Do I smell an elephant?
Political and Administrative Interface – Complementarity and Conflict

• Politics
  • exercise of power by political leadership
  • reflecting programs, ideologies, vested interests

+ public administration
  • the machinery of government as technical competence

= Government
Categories of Political Commitment

- emphasis on policy coherence
- emphasis on policy prioritization

Decisions for Coherence
- Participation for Coherence
- Evidence for Coherence

Decisions on Priorities
- Participation?
- Evidence?
How to navigate the politics

• Provide advice to politicians based on expertise
  • Bureaucratic competence: “ability to do the work of government expertly, and to do it according to explicit, objective standards rather than to personal or party or other obligations and loyalties” (Kaufman 1956: 1060)

• Anticipate political considerations and implications when advising
  o Be aware of the political preferences of political masters, potential political conflicts, and implications
Good Case: Finland

- The Finland We Want 2050
  - National sustainable development strategy with long-term objectives
- Government Implementation Plans
  - “The GOV Plan(s) include long term policy principles, which serve over Government terms: Decision-making and administrative action need to be long-term and transformative, increase policy coherence and aim at strengthening global partnerships, and underline ownership and inclusion. These are the key policy principles of sustainable development and also the key requirements for successful implementation, to which the Government pays special attention.” (Finland in UN-DESA Institutional Readiness Assessment, June 2020)
Finland’s political commitment towards policy coherence has been institutionalized at the highest level. The National Commission on Sustainable Development (NCSD) chaired by the Prime Minister, vice chaired by ministry of the environment, oversaw the development of the long-term sustainable development strategy “The Finland We Want By 2050”.

The Commission includes 57 members and 57 deputy members from all spheres of the society: Government, state administration, Parliamentary Committees, business and industry, trade unions, regions and local authorities, civil society organizations, church, and academia. The main task of the newly appointed Commission is to accelerate the national implementation of the 2030 Agenda, as well as to monitor and assess the progress made.

National Agenda 2030 Architecture: Prime Minister’s Office (PMO) is in charge of promoting coherent and integrated planning, policy making, implementation, and monitoring and evaluation of the SDGs. The national 2030 Agenda Coordination Secretariat is located within the PMO. The secretariat consists of three officials and supporting assistants. The Inter-Ministerial Coordination Network, led by the PMO and consisting of sustainable development Focal Points from all line Ministries, is the key supporting body for the PMO coordination secretariat.
